

How to install VPN Client with Windows 10:

1. Begin by selecting the Start Menu on the bottom left corner of your desktop. Then find and select the "Store" icon.
2. When connected to the store, search for and install the "Pulse Secure" application.

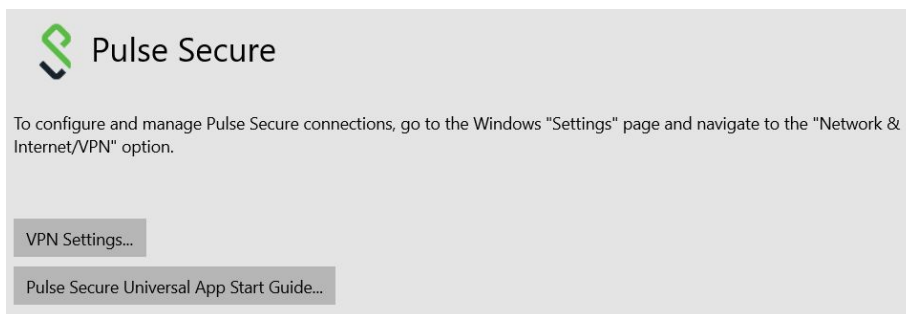

3. Once installed, you will be asked to select a Microsoft Account.

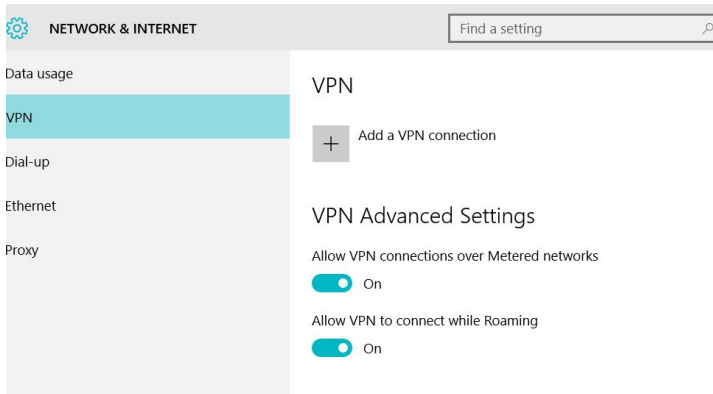

Choose an account

4. You will then be prompted to sign into your Microsoft account. If you do not have one, you will have to create a new account. (REMEMBER that the new account you create will be your new log on information for your computer).
5. After the download has completed, select the Start Menu again and open Pulse Secure by selecting the icon. It should appear under "Recently Added".

6. Select VPN Settings.
7. Choose VPN under "Network & Internet", followed by clicking on "Add a VPN connection".

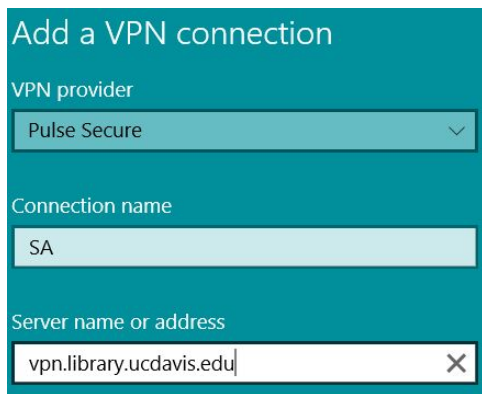

8. You will be asked to select and provide information about the connection you would like to make (provided below).

VPN provider: [Pulse Secure](#)

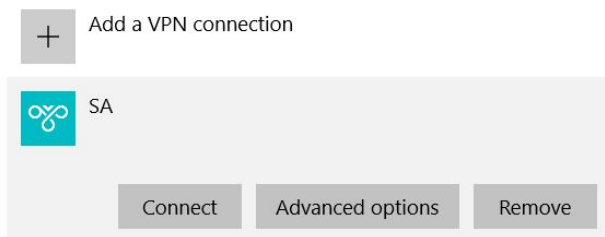

Connection Name: [SA](#)

Server Name or Address: [vpn.library.ucdavis.edu](#)

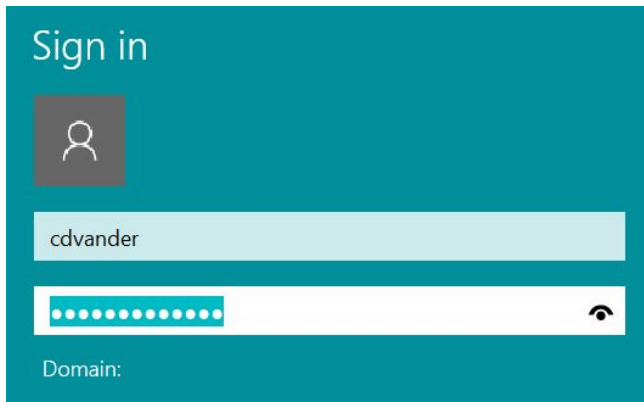

9. The SA connection will pop up. Select the option "Connect".

VPN

10. You will be prompted to enter your Kerberos/ CAS information.

11. If all information checks out, you will officially be connected to the VPN. Be sure to restart the computer upon completion.
